

Flot Design System

Brand guide for Flot — your money smarter.

Open Hubb SL Limited · Regulated by the Bank of Sierra Leone

What is Flot?

Flot collapses the four-or-five apps people currently juggle — mobile money, bank transfers, bills, peer-to-peer, travel — into one account, one identity, one balance.

A WhatsApp-first personal finance super-app for Sierra Leone and emerging African markets, built by Open Hubb SL Limited and regulated by the Bank of Sierra Leone.

THE THREE SURFACES

Surface	Where it lives	Patterns
Flot Chat	WhatsApp + in-app conversational	Bubble + card + quick-reply chips
Flot App	Native iOS / Android super-app	Tab bar, sheets, large amount inputs, cards
Flot Business	Merchant web + mobile (acquiring)	Dashboard, forms, payment links, API/SDK

Flot Business accepts Orange Money, AfriMoney, Visa, Mastercard, and Flot wallet on a single rail.

Design principles

01 Low-end Android first

Components must look correct at 360px width, render fast, and degrade gracefully without animations or heavy gradients.

02 Data-conscious

The teal gradient is for marketing and splash only. In-app surfaces use solid mint, graphite, white, and paper.

03 Confirm-by-default for money

Every value-moving action shows an explicit confirm step. Mint is the confirm CTA — never red destructive styling for normal payments.

04 Tier-aware UI

KYC tiers L0/L1/L2 — banners, empty states, and gated CTAs use a documented 'upgrade required' pattern.

05 Three surfaces, one system

Conversational, native, and dashboard each lean on the patterns they're best at, but tokens are shared.

Color palette

The palette is tight on purpose. One accent (mint), one dark (graphite), one neutral (paper), one signature gradient. We do not introduce new hues — secondary information uses graphite tints.

BRAND COLORS

Token	Hex	RGB	Role
Mint Green	#80FFCC	128 / 255 / 204	Primary accent · CTAs · highlights · success
Graphite Grey	#3D3D3D	61 / 61 / 61	Primary text · app icon bg · dark surfaces
Flot Gradient	#5EC9C9 → #80FFCC	—	Splash · hero · 'money in motion' only
Off-white / Paper	#F5F4EF	245 / 244 / 239	Default light background
Pure black	#000000	0 / 0 / 0	High-contrast pitch · marketing only

GRADIENT USAGE

Where the gradient is allowed: splash, marketing pages, transfer-success 'money in motion' moment, share cards.
Where it is NOT allowed: in-app surfaces, list rows, form fields, wallet balance card body. Those use solid mint or solid graphite.

MINT SCALE

50	100	200	300	400	500	600	700
#F0FFF8	#D6FFEE	#B5FFE0	#80FFCC	#4FE3B2	#2EBF92	#1F9A75	#157657

GREY SCALE

25	50	100	200	300	400	500	600	700	800
#FBFBFA	#F2F2F0	#E6E6E3	#CFCFCB	#A9A9A4	#7A7A76	#5C5C58	#3D3D3D	#2A2A2A	#1A1A1A

SEMANTIC STATUS

Token	Color	Background	Usage
Success	#1F9A75	#D6FFEE	Confirmations, completed states
Warning	#C58A1A	#FBEFCE	Caution, limits, expiry notices
Danger	#C0382B	#FBEAE7	True failures only — never confirm CTAs
Info	#5EC9C9	#E0F4F4	Informational banners, tips

Typography

Geometric sans-serif. **Satoshi** is the brand family — Bold (700) for the Flot logotype and headlines, Medium (500) for subheadings and supporting text. **Inter** is the operational fallback. **JetBrains Mono** for code and IDs.

Font Families

Family	Weights	Role
Helvetica	Bold (700), Medium (500), Black (900)	Brand display — logo, headlines, subheads
Inter	400, 500, 600, 700	Operational fallback — body, forms, email
JetBrains Mono	400, 500	Code, IDs, transaction references

Type Scale

Token	Size	Weight	Usage
Display 1	44-72px (clamp)	800	Hero statements — 'Say it. Confirm it. Done.'
Display 2	34-56px (clamp)	800	Secondary hero, splash
H1	32px	800	Section titles, wallet balance header
H2	24px	700	Card titles, flow headers
H3	20px	700	Sub-sections
H4	18px	600	Minor section titles
Body LG	17px	400	Large body text
Body	15px	400	Default body copy
Body SM	13px	400	Secondary paragraphs
Caption	12px	400	Timestamps, metadata
Overline	11px	600	Section labels, ALL CAPS + tracking
Amount XL	44px	700 tabular	Wallet hero balance
Amount LG	28px	700 tabular	Sheet confirm amount
Amount MD	20px	700 tabular	Row amount

Key Rules

Display weights are heavy and confident — Satoshi Bold (700) on headlines; Black (900) for largest display moments. Italics are an accent — step numbers, closing word, brand moments. Never running copy.

Body copy is neutral and unfussy — Inter 400/500.

Numbers are tabular everywhere money appears (font-variant-numeric: tabular-nums lining-nums).

Voice & tone

Confident, plain-language, short. We talk to people who may be using a digital wallet for the first time. Calm — never shouty, even on CTAs.

CADENCE

We use sentence fragments broken by full stops, with rhythm built from threes:

"Say it. Confirm it. Done."

"One conversation. Everything in it."

"No new app · lives in WhatsApp."

The middle dot (·) is a brand mannerism — used for inline lists and feature pairs. It is never an em-dash and never a comma where a · will do.

CASING

Context	Rule	Example
Headlines & display	Sentence case	"Send money." not "Send Money."
Buttons	Sentence case, no period	"Send", "Confirm", "Pay SLE 240.00"
Overlines	ALL CAPS, +0.08em tracking	RECENT ACTIVITY
Currency code	Uppercase, prefixed	SLE 1,240.00

WHAT WE SAY vs. WHAT WE DON'T

Plain (use this)	Jargon (never this)
"Send money"	"Initiate transfer"
"Couldn't connect. Try again."	"Network error 503"
"We need a photo of your ID"	"KYC verification required"
"Your card is on the way"	"Card issuance in transit"
"Pay SLE 240.00"	"Authorise transaction"

PRONOUNS & EMOJI

You for the customer. **We** for Flot. Never 'the user.' Never 'they.'

No emoji in product UI. The brand mannerism is the middle dot, heavy display weight, and italic accent. Only Unicode glyphs: · (separator), → (CTAs), ✓ (success, as SVG).

Spacing, radii & elevation

SPACING (4px grid)

Token	Value	Token	Value	Token	Value
space-1	2px	space-5	16px	space-9	40px
space-2	4px	space-6	20px	space-10	56px
space-3	8px	space-7	24px	space-11	72px
space-4	12px	space-8	32px	space-12	96px

CORNER RADII

Token	Value	Usage
radius-sm	8px	Form fields, chips
radius-md	12px	Default card
radius-lg	16px	Sheets, large card
radius-xl	24px	Hero card, wallet balance card, virtual card
radius-2xl	28px	App icon, splash blob
radius-pill	999px	Primary CTA — always pill-shaped

ELEVATION

Token	Value	Usage
shadow-1	0 1px 2px rgba(20,20,20,.04)	Hairline, list items on white
shadow-2	0 2px 6px rgba(20,20,20,.06)	Cards
shadow-3	0 8px 24px rgba(20,20,20,.08)	Bottom sheets, popovers
shadow-mint	0 8px 24px rgba(46,191,146,.25)	Optional CTA glow (opt-in)

No inner shadows or neumorphic effects. Borders carry secondary structure. Never combine border + shadow on same element.

Buttons & interaction states

BUTTON TYPES

Type	Style	Example
Primary	Mint bg, graphite text, pill-shaped	Pay SLE 240.00 →
Secondary	Graphite bg, white text, pill	Continue
Ghost	Transparent, graphite text, 1.5px border	Cancel
Text	No bg, mint-700 text	Learn more

CTA is **always pill-shaped**. Primary uses graphite text on mint — **never white on mint**. Confirm CTAs include verb + amount. Minimum height: 48px.

INTERACTION STATES

State	Behavior
Hover (web only)	Background steps one level (white → grey-50, mint-300 → mint-400). No opacity change.
Press (native + web)	Scale 0.98, duration 120ms, ease-out.
Focus	2px mint outline, 2px offset. Never the browser default.
Disabled	38% opacity. No greyscale filter.

Motion

EASING & DURATION

Token	Value	Usage
--ease-out	cubic-bezier(.2, .7, .2, 1)	Entrances
--ease-in	cubic-bezier(.4, 0, .8, .3)	Dismissals
--dur-1	120ms	Press, micro-interactions
--dur-2	200ms	Transitions, fades
--dur-3	320ms	Sheet entrances, complex animations

No bouncy springs. Calm, never shouty applies to motion too.

The signature motion is a sheet rising from below with a soft fade. Confirm flows always use this.

On low-end devices (prefers-reduced-motion: reduce), animations swap for fades or disappear entirely.

CONFIRM-BY-DEFAULT PATTERN

Every money-moving action terminates in a bottom sheet that:

1. Restates the amount in large tabular numerals
2. Restates the recipient (avatar, name, network)
3. Shows the source method (Flot wallet / Orange / AfriMoney / card)
4. Has one mint pill CTA — verb + amount: "Pay SLE 240.00 →"
5. Cancel is a tertiary text button, not a red destructive button

Iconography

We use **Lucide** (lucide.dev) as our primary icon library. Open-source, 1,400+ icons, matching our 2px stroke, geometric, slightly rounded aesthetic. Substitution flag — replace with Flot-specific set when commissioned.

USAGE RULES

Rule	Specification
Stroke width	2px. Never solid-fill icons in product UI.
Sizes	16 / 20 / 24 px. 24px is the row default.
Color	Matches adjacent text: fg-1 on titles, fg-2 on captions, graphite on mint, mint on graphite.
Never coloured	No multi-tone, no gradient-fill icons.

BRAND GLYPHS

Flot logomark: Mint geometric 'F' on graphite rounded square. App icon, favicon, splash. Never recolour. Minimum size 24x24.

Currency code chips: SLE / USD rendered as a 24x16 tabular pill in graphite. Typeset, not iconic.

Network logos: Orange Money, AfriMoney, Visa, Mastercard appear as their own brand marks. Do not restyle.

No emoji in product UI. Only Unicode glyphs: · (U+00B7, separator), → (right arrow, CTAs), ✓ (heavy check, success — rendered as SVG in mint pill).

Layout & structure

Property	Value	Notes
Min width	360px	Test here first
Gutter (mobile)	16px	clamp(16px, 4vw, 32px)
Tab bar	56px + safe-area	Fixed bottom
Top header	56px standard / 88px with balance	
Button height	48px minimum	Above 44pt hit-target floor
List rows	64px standard	Transaction rows
Max content	1200px	Desktop constraint

BACKGROUNDS & IMAGERY

Solid surfaces by default — paper, white, graphite, black. Never a gradient on a list view.

The signature gradient appears only on splash, success-share, and marketing hero.

Photography (when used): warm-neutral, sun-lit, real Sierra Leone settings. Never cool-blue tech stock.

No grain, no scan-lines, no faux-noise overlays. No hand-drawn illustrations. The brand is precise.

BORDERS

Token	Value	Usage
--border-1	1px #E6E6E3	Hairline on light surfaces
--border-2	1px #CFCFCB	Form fields, cards without shadow
(on dark)	1px rgba(255,255,255,.12)	Dark surface dividers

Never combine border + shadow on the same element. Either, not both.
